Stan Xu

949-668-5161 | stan.xu@emory.edu | Atlanta, GA

EDUCATION

Emory University **Atlanta, GA**
Bachelor of Applied Mathematics & Statistics Expected *May 2027*

- **GPA:** 3.85 out of 4.0
- **Relevant Coursework:** Statistical Computing, Computer Science II, Approaches to Data Sci.w/Text, Mathematics of Data Science, Regression Analysis, Machine Learning, Mathematical Statistics.

WORK & RESEARCH EXPERIENCE

ShanDa Capital **Shanghai, China**
Data Analyst Intern *June 2025 – Aug 2025*

- Collaborated with 4 team members, built end-to-end data pipelines in Python using APIs to collect, clean, and integrate macro, market, and firm-level data from 30+ sources for downstream modeling and analysis.
- Collected and integrated 3M+ rows of financial time-series and company-level data from equity markets, corporate filings, and industry databases; cleaned missing values, outliers, and inconsistent accounting definitions using Python and SQL.
- Built and evaluated supervised learning models (regularized regression and tree-based models) to predict short- to mid-term asset return distributions
- Designed data visualizations and dashboards to communicate model outputs and insights to non-technical stakeholders; presented results in internal and client-facing settings.

Sports Analytics Research | Wharton School Moneyball Academy **Philadelphia, PA**
Data Analytics Fellow *Jun 2023 – Aug 2023*

- Engineered predictive models using linear regression and probability theory to analyze NBA underdog team strategies, identifying key performance factors to improve win probability by 18% in simulation scenarios.
- Developed interactive dashboards in R and Tableau to visualize player efficiency metrics and team dynamics for Philadelphia Eagles/Phillies analysts.
- Applied statistical reasoning to optimize sports data interpretation workflows during workshops led by professional sports executives.

PROJECTS

Steam Reviews Emotion Analysis and Classification with NLP

- Led team of 4, conducted NLP analysis of 500K+ Steam game reviews, designing a teacher–student emotion modeling pipeline to study genre-specific emotional intensity and linguistic signatures across nine emotion categories
- Built a scalable emotion classification system using DistilRoBERTa (teacher) and TF-IDF + LinearSVC (student) to enable efficient large-scale inference while preserving interpretability and label quality
- Applied bootstrap inference and log-odds lexical analysis to quantify statistically significant differences in emotional intensity and language use across Action, Adventure, Indie, RPG, Strategy, and Casual genres
- Conducted model error analysis via confusion matrices and misclassification inspection, revealing genre overlap, class imbalance effects, and limitations of text-only classification for emotion-heavy genre

E-commerce Evaluation Model for Product Listing | Listing2Speak

- Built a data-driven platform analytics systems using Python/Flask, integrating machine learning models through Python Scikit-Learn to optimize e-commerce product listings and elevate user engagement by 42%.
- Automated data extraction pipelines via Python Selenium, processing 10K+ product listings weekly for predictive analytics.
- Designed and developed an interactive website using HTML and CSS, allowing users to evaluate product listings based on machine learning models and AI-driven algorithm. Achieved a user satisfaction rate of over 95% from feedback analysis.

TECHNICAL SKILLS

- **Programming & Data & Machine Learning:** Python (Pandas, NumPy, Scikit-learn, PyTorch), SQL, R, Java, ExcelHTML/CSS, Tableau, Regression, Tree-based Models, Clustering, Deep Learning, NLP
